Use the ACM-1000 build-in switch to turn lights or devices up to 1000 Watt on/off wirelessly. The receiver can easily be installed in an existing (wall or ceiling) installation box or in closets. You can use a COCO transmitter of your choice to control the receiver. The receiver has an electronic memory with 6 memory addresses, which means you can use up to 6 different COCO transmitters to control the receiver. If you want to install this product outdoors, you can use the waterproof junction box (type OWH-001).
